Ex. 6 PP / Ex. 7(C)

Thank you for asking.

A while back, Nick asked me if there was anything else. I asked him about BES' follow up on that and the contents of the unit with the downspout pipe in the lot.

He immediately contacted LIT Industrial. They replied with photographs taken inside the unit. It was a chiller. No product storage of any kind was observed. They say that only non-contact condensate went down this water line. LIT Industrial agreed to cement this connection closed once the chiller unit was moved. I believe this was completed. I don't think it's likely that the former tenant would have gone to the trouble of using this connection for disposal of hazardous chemistry from the plant. I have heard of no investigation of the contents/residues in this line.

I can certainly locate the actual records (email questions from BES, and LIT Industrial's response with photographs and narrative) if you think you'll need them.

Jay

Jay,

I forgot to follow up on this email. Did Nick find out anything regarding the

Nick from City of Portland's Bureau of Env Services is checking on a last detail about the metal outbuilding and what appeared to be a discharge point. It might have been chiller condensate, he's checking.

Let me know when enough is enough or I will keep copying you.
